

Here we are in Trieste.

Trieste is a European city. No one dies from malaria in Trieste.

Although he who suffers from mental illness perishes. Mario Maj, world president of psychiatrists states that all mental disturbances are diagnosable and curable. But in Trieste a mental disorder is punished by the loss of human rights, beginning with the right to prevention, healing and assistance, like all other citizens.. The mental sufferer is condemned to chronicity, or to jail, or death.

Italy is used to psychiatric horrors. A flawed law of over thirty years ago has permitted pseudo psychiatrists to throw sick persons into the streets in order to sell their inalienable property that should have been allocated to healing and aid. A massacre of thirty thousand persons deprived of every right, including the right to life itself. But is totally concealed. In Italy regarding mental health, the national mortality rate is six times higher than the european average. It's astounding! It boils down to genocide.

The politicians pretend to know nothing of the uninterrupted slaughter of innocents. The families are overwhelmed with desperation and grief, or are intimidated and persecuted. In Trieste depressed persons commit suicide in the psychiatric clinic when all the employee's are occupied in political reunions.

The psychiatrists kidnap and intern the sick but also sane persons as well, and force them to undergo drug therapy and threats if they even dare to protest. The abuses are so severe that very often the victims are not believed. Only once are they mentioned in a newspaper article of January 2009.

But in Trieste politicians and newspapers responded with a campaign of lies and public lynching of the victims.

A youngster is suffering because of a summer heat wave. His father accompanies him to the mental health center to seek help. The psychiatrists try to persuade the father, if the son is aggressive, to report him to the police. And telling him that "In this manner it will be finished forever". Trieste like the Cambodia of Pol Pot.

Another youngster with the same problem caused by the excessive heat is deliberately brought to a desperate condition in order to persecute him by jackals who have considerable standing in the hierarchy of governing bodies and institutions. This youngster has been fiercely and cynically crucified. The final objective? To confiscate his possessions. Both youngsters have lost their lives. The prescriptions in both cases have been signed by the director of the department of mental health, no less, Giuseppe Dell'Acqua.

The pathetic social services with the collusion of the psychiatrists encourage the kidnapping of boys, of children, even of the newborn!! Destroy the families. The judges sign the papers without seeing the children and parents not even in photographs.

In the city of Trieste alone, the minors seized from families comprise half of the national total of Italy. Half! What eventually happens to all these youngsters taken from their families?

The seized children cost the tax payers from 200 up to 500 euros per day! For the families there is absolutely no possibility whatsoever to even pay a ransom fee, in order to recover their loved ones! Is this Europe?

But this is not enough. An overseeing judge, in accordance with psychiatrists, points out that with a population of less than 200.000 inhabitants it may be possible that 25.000 persons can be practically deprived of their basic human rights. That is 13 % of the population. Projecting to the national level involves around 7 million people. Is this just Delirium? Or something else?.

Why does Trieste have these frightful numbers? There is only one answer: from forty years in Trieste there has been entrenched the Basaglia lobby, irreversibly and with impunity degenerated.

The legendary reputation of the psychiatry of Trieste is the result of 40 years of falsifications and political propaganda. The logistic organization that they exhibit serves to control, like in a mafia manner, the area and the people.

The psychiatrists, here, do not have any interest at all to heal or to rehabilitate the patients.

In Trieste persons have value only by how they can be reduced to beasts, dehumanized, in order to be eligible for financial aid, investments, to create jobs in institutions, cooperatives, to govern people, money, votes; that is power.

The degenerate role of the psychiatry explains why Trieste holds the sad record of suicides. The local and national authorities are disinterested and will never do anything.

In the meantime the supreme head of the Basaglia lobby, Franco Rotelli, can publicly and with impunity declare: "We have lost thirty years". How many youngsters were murdered or reduced to chronicity in thirty years?

I denounce to the W.H.O., to the Human Rights Committee, to the European Court of Human Rights, to the European Court of Justice, also to European Commission, President Barroso, and to all international health and justice institutions, the violation of human rights and flagrant criminal acts that have been committed for more than thirty years by the public psychiatry in Italy with the collusion of the establishment.

In the name of the association I represent, I ask the WHO and all international health and justice institutions, currently by the principles which fostered them, to answer this plea, and to intervene by every useful means in order to shape a health care system that is human and civilized, first of all in Trieste, where the gangrene of political psychiatry is wide spread and prevalent.
